

On-Demand EDI Service

MANAGE YOUR BUSINESS, NOT YOUR EDI

SPS Commerce's on-demand Electronic Data Interchange (EDI) service enables your organization to satisfy its trading partners' requirements for electronic purchase orders, Advance Ship Notices (ASNs), invoices and more.

SPS' EDI service is your answer to a comprehensive, turnkey, outsourced EDI department. As part of our SPSCommerce.net suite of supply chain services, our EDI service includes technology, reusable EDI maps and staffing resources to ensure reliable and efficient interactions with trading partners. We manage all of your EDI requirements so you can focus on managing your business.

BENEFITS YOU CAN BELIEVE IN

- ▶ No hardware or software to install and maintain
- ▶ Low upfront costs and total cost of ownership
- ▶ Rapid implementations for customers and global supply chain partners, such as sourcing companies and factories
- ▶ Immediate connections to more than 1,500 retailers, grocers and distributors
- ▶ Outsourced team of EDI experts handles full range of EDI staffing tasks

A VARIETY OF OPTIONS TO SUPPORT YOUR EDI NEEDS

Three types of EDI services are available based on your business needs, such as your transaction volume and the number of user locations:

Status	Sender	Type	ID	Date	Next Steps
SENT	Sams Club	Order	4740641515	Sep 7, 2010 12:32:22 PM	▶

	Best Buy USA	Order	test777	Jun 15, 2010 4:26:00 PM	▶

1. **Integrated EDI** Ideal for high-volume manufacturers, our integrated EDI service eliminates data entry by sending data directly into and out of your accounting, ERP, packing and shipping, and/or warehouse systems.
2. **WebForms EDI** For lower transaction volumes, WebForms allows you to send and receive documents using online templates. These forms minimize keystrokes by automatically filling in information and checking for errors before documents are sent to your customers.
3. **Paper Conversion** For very low-volume businesses without a personal computer, SPS converts documents from paper to electronic file formats.

1111 Did you know that you can purchase UCC-128 label stock for use with WebForms through www.spscommerce.net? Simply click [here](#) to buy UCC-128 Label Stock.

INTEGRATE WITH SUPPLY CHAIN PARTNERS AROUND THE GLOBE

As manufacturers outsource more supply chain functions to domestic and global partners such as 3PLs and sourcing companies, it becomes critical to integrate these firms into EDI processes. SPS Commerce offers a superior alternative to traditional EDI software by giving trading partners real-time access to key EDI data through a standard Web browser or through a simple, but powerful application programming interface (API).

Using SPS' multi-party capabilities, trading partners can perform such tasks as forwarding purchase orders, printing and affixing shipping labels, and sending ASNs. These

improvements provide better visibility for the manufacturer and the retailer, and eliminate many manual processes that can take days out of the order fulfillment process. With SPS' access management capability, manufacturers can offer international or third-party supply chain partners limited and secure access to outsourced EDI services. These users can be given permission to view and create certain EDI documents, such as ASNs, on behalf of the supplier for specific trading partners. Organizations can also use SPS Commerce's services to filter and forward the content of EDI documents, such as purchase orders, to additional locations or third parties.

BOOST VISIBILITY AND IMPROVE SUPPLY CHAIN PERFORMANCE

SPS Commerce's reporting service enhances visibility and accountability by providing insight into your interactions with trading partners. An integral part of SPS' on-demand EDI offerings, our reporting service offers more complete, accurate and consistent data about your EDI performance than traditional EDI software. Three types of reports are available:

- ▶ Real-time query and search allow you to quickly look up documents just as you would with a web search engine like Google or Yahoo! and read them in a human-readable, paper-looking format.
- ▶ Real-time event messaging provides you with 24x7 notifications of new documents, messages from trading partners, and any potential errors and resolutions with your customers.
- ▶ Operational reports allow you to monitor day-to-day transactions. Using these reports you can verify and retrieve key EDI information, such as an advance ship notice (ASN), with ease.
- ▶ Alerts enable you to identify and isolate urgent issues requiring your immediate attention. Users are first notified of an issue via email and then directed to a report that offers additional detail on the situation.
- ▶ Business intelligence lets you evaluate the performance of your supply chain and your trading partners, and identify key issues and trends that can lead to significant operational improvement.

Whether the information is needed to quickly identify potential trouble spots or to identify trends in your EDI performance, SPS' reporting service can help you and your trading partners achieve their EDI goals.

COMPREHENSIVE SERVICES FOR THE RETAIL SUPPLY CHAIN

SPS' on-demand EDI service is part of a broad suite of services for the retail supply chain.

SPS Commerce also offers:

Trading Partner Integration: enables organizations to comply with customers' trading requirements and exchange information electronically.

Trading Partner Enablement: trading partner community development programs that allow companies to implement new integrations with trading partners.

Trading Partner Applications: help companies process and fulfill orders more efficiently.

Trading Partner Intelligence: services that use trading partner information to improve sales and operations.

Trading Partner Supplies: a one-stop shop for all the equipment and materials needed for a successful retail fulfillment process.
