

SPS Commerce Solutions for Software Providers

SPS Commerce offers B2B integration, B2Bi, solutions as a web-based application accessible from a web browser, and via direct integration with its EDI customers' software applications (ERP, SCM, WMS, TMS, etc). To date, SPS has integrated its SaaS EDI services with well over 100 different software applications through SPS' standard API. In addition, SPS offers packaged integration with more than 20 unique software applications through its

File Integration EDI Service.

SPS Commerce offers its Software Provider partners the option to co-develop direct product integration via SPS' B2Bi API. This provides ISVs, system integrators, and other solution providers with the necessary resources to leverage the SPS Commerce network and SaaS EDI services in their own applications and service offerings. In addition, many of its partners also elect to participate in marketing, referral, and reseller programs in conjunction with product integration to augment their solutions.
