

## SPS Commerce for NetSuite

### Retailers & Grocers

1200+ mapped in the SPS network

### Seamless Integration

SPS Commerce's Outsourced EDI for NetSuite provides your organization with the benefits of Outsourced EDI while tying directly into your on-demand ERP application. Your company can take advantage of the multi-tenant, world-class EDI maps for all of your customers, while creating a single point of integration into NetSuite. SPS Commerce uses a combination of proven technologies and best practices to quickly enable trading of electronic purchase orders, advanced ship notices, invoices and any other document required by your customers. Our integrated NetSuite solutions can also support your extended supply chain needs as well with business entities like 3PLs, Carriers, Sourcing Companies, and Factors.

### SPSCommerce.net: The EDI Software Alternative

By directly connecting to the NetSuite hosted application with SPSCommerce.net, you connect with the largest network of retailers in the world. With over 1,200 retailers currently connected, you will most likely find that your customers are already trading on our network.

## Leveraging The Power of SaaS Throughout Your Supply Chain

With SPS Commerce's integration to NetSuite, you have a pre-built integration option to SPSCOMMERCE.NET for high volume documents like purchase orders and invoices. Because both companies are Software-as-a-Service providers, you can integrate to your customers without having to install any software. You get the benefits of multi-tenant integration, in addition to all the benefits of a SaaS back-office.

Your NetSuite account integrates directly into SPS Commerce, instead of to each customer, greatly reducing both the initial and ongoing integration work. This single transaction integration now accommodates all of your customers' current and future data requirements. Because it is not specific to a unique relationship, it can also be used when you add additional connections to other customers.

## Meets All Your EDI Requirements

In addition, our integration with NetSuite also features:

- Easy to use SaaS ASN module
- Cross-referencing for Customer, Item and Ship-to Addresses
- Pre-built integration for third-party logistic provider (3PL) requirements
- Support for multiple order management models including Cross-dock and Ship-to-Store
- Online label service, meaning full compliance with all of your customers' GS1-128 (formerly UCC-128) labels without additional software

## Extensive Document Library

Our flexible NetSuite solution supports existing EDI documents, as well as new XML-based documents, so your initial investment can be leveraged with the ongoing demands of your customers and trading community.

SPSCOMMERCE.NET supports the following documents:

- ASN w/ Multiple P.O.s
- Blanket P.O. w/ P.O. Releases
- Credit/Debit Adjustment
- Free Form Text Messaging
- Order Inquiry
- Organization Relationship w/ Cross Dock Planning Schedule w/ Release
- And hundreds more ...
