

UNIVERSAL NETWORK INTEGRATED FULFILLMENT

Definitions & Additional Feature Pricing

Definitions of key terms for the **SPS Fulfillment Services**

Definitions

- **Trading Partner:** An entity with which Customer trades EDI business documents on a single EDI ID. Multiple EDI IDs equate to multiple trading partners, though the trading partner may operate under a single business name.
- **Integrated Fulfillment Trading Partner Validation:** A cycle or scenario of end-to-end testing with a trading partner and Customer's application. If a single trading partner requires multiple test scenarios, additional fees may apply. If Customer requires trading partner validation for multiple instances of their ERP system or other application(s), multiple fees may also apply.
- **Trading Partner Connectivity:** The method of connecting to a single trading partner. Examples include VAN, AS2, FTP and VPN.
- **Network Map:** The SPS standard data format. Multiple versions are available; all versions include one-to-one field sourcing to the applicable ERP defined format.

Additional Feature Pricing
