SPS COMMERCE

Definitions of key terms for SPS Fulfillment Services

Definitions

Trading Partner: An entity with which Customer trades business documents on a single ID. Multiple IDs equate to multiple trading partners, though the trading partner may operate under a single business name.

Integrated Fulfillment Trading Partner Validation: A cycle or scenario of end-to-end testing with a trading partner and Customer's application. If a single trading partner requires multiple test scenarios or testing of multiple ERP systems or other applications is required, additional fees may apply.

Trading Partner Connectivity: The method of connecting to a single trading partner. Examples include VAN, AS2, FTP and VPN.

Network Document: The SPS standard data format. Multiple versions are available; all versions include one-to-one field sourcing to the applicable ERP defined format.
